

SECTION 1040 STEEL SHEET PILING

1040.1 REQUIREMENTS

Steel sheet piling shall conform to the requirements of ASTM A 328 or A 572, grades 42 through 55 (290 through 345) as specified. The piling shall be true, straight and uniform in section. The side of each piece shall be furnished with an interlock that is continuous for the full length of the sheet. The strength of the sheeting shall be determined by its section modulus.
